CLINICAL BIOCHEMISTRY REVIEWS

CONTENTS

Manuel Buchwald	1	**Use of Cultured Human Cells for Biochemical Analysis**
	2	I. Introduction
	2	II. Cultured Human Cells
	6	III. General Aspects of Cell Culture
	11	IV. Sources of Variability
	14	V. Conclusions
J.C. Crawhall	21	**A Review of the Clinical Presentations and Laboratory Findings in Two Uncommon Hereditary Disorders of Sulfur Amino Acid Metabolism: Beta-Mercaptolactate-Cysteine Disulfiduria and Sulfite Oxidase Deficiency**
	22	I. Introduction
	22	II. Clinical Presentations of Beta-Mercaptolactate-Cysteine Disulfiduria
	24	III. Laboratory Criteria for Establishment of the Diagnosis of Mercaptolactate-Cysteine Disulfiduria
	25	IV. Clinical Presentation of Sulfite Oxidase Deficiency
	26	V. Laboratory Criteria for the Establishment of the Diagnosis
	26	VI. Antenatal Detection of Combined Xanthine and Sulfite Oxidase Deficiencies
	28	VII. Conclusion
Jean-Claude Dreyfus and Axel Kahn	33	**Red Cell Enzymopathies (Molecular Mechanisms)**
	34	I. Introduction
	36	II. Enzymopathies of the Glycolytic Pathway
	40	III. Enzymopathies of Redox Pathways
	45	IV. Purine and Pyrimidine Metabolism
	46	V. Conclusion
Henry C. Ford	55	**Is There a Consistent, Specific Serum or Plasma Abnormality in Patients with Multiple Sclerosis?**
	56	I. Introduction
	56	II. Non-Protein Components
	59	III. Proteins
	73	IV. Demyelinating Factors and Neuroelectric Blocking Factors
	74	V. Conclusions
Jiri Frohlich and Roger McLeod	87	**Lecithin: Cholesterol Acyltransferase (LCAT)**
	88	I. Introduction
	88	II. LCAT and Lipoprotein Metabolism
	91	III. Enzymatic Properties of LCAT
	92	IV. Assessment of LCAT Activity
	93	V. Purification and Characterization of LCAT
	94	VI. LCAT and Erythrocyte Lipids
	95	VII. LCAT Deficiency States
	104	VIII. Assay of LCAT Activity as a Diagnostic Test
	104	IX. Conclusion

J. Thomas Hindmarsh	117	**Clinical Disorders of Porphyrin Metabolism**
	117	I. Introduction
	118	II. Heme Synthesis
	120	III. Control of Synthesis
	122	IV. Porphyrin Excretion, Normal and Abnormal
	124	V. The Porphyrias
	124	VI. Congenital Erythropoietic Porphyria
	126	VII. Porphyria Cutanea Tarda (PCT)
	129	VIII. Toxic Porphyria
	129	IX. Hepatoerythropoietic Porphyria
	130	X. Harderoporphyria
	130	XI. Protoporphyria
	130	XII. Acute Intermittent Porphyria
	132	XIII. ALA Dehydratase Deficiency
	132	XIV. Porphyria Variegata
	134	XV. Hereditary Coproporphyria
	134	XVI. Investigation of a Suspected Case of Porphyria
	134	XVII. Methods
David S.C. Lee	141	**Human Serum Vitamin B_{12} Assay Methods—A Review**
	142	I. Introduction
	142	II. Absorption and Transport of Vitamin B_{12}
	142	III. Clinical and Analytical Perspectives
	144	IV. Reported Methods for Serum B_{12} Assays
	150	V. Assessment of Serum B_{12} Assay Methods
	151	VI. Conclusion
Vincent Marks, Wynne Aherne, Judie English and Josephine Arendt	159	**Chronopharmacology**
	159	I. Introduction
	160	II. Pharmacokinetics, Pharmacodynamics and Toxicity
	163	III. Antineoplastic Drugs
	168	IV. Conclusion
Vincent Marks	173	**How Our Food Affects Our Hormones**
	173	I. Introduction
	174	II. Neural Control of Hormone Secretion
	175	III. Indirect Effects
	176	IV. Gut Hormones
	177	V. Entero-Insular Axis
	177	VI. GIP
	179	VII. Obesity and Diabetes
	182	VIII. Food Texture
	182	IX. Conclusions
Morris R. Pudek	187	**Antibody Interference with Biochemical Tests and Its Clinical Significance**
	188	I. Introduction
	190	II. Enzymes
	198	III. Hormones
	204	IV. Plasma Proteins
	207	V. Miscellaneous
Morton K. Schwartz	217	**Immunoassay of Enzymes—An Overview**
	217	I. Introduction
	218	II. Acid Phosphatase
	219	III. Alkaline Phosphatase
	221	IV. Amylase
	221	V. Aspartate Aminotransferase
	223	VI. Creatine Kinase

	225	VII. Lactate Dehydrogenase
	226	VIII. Lysozyme (Muramidase)
	227	IX. Neuron Specific Enolase
	228	X. Nucleases
	229	XI. Phosphohexose Isomerase
	230	XII. Terminal Deoxynucleotidyl Transferase
	230	XIII. Enzymes in Chemotherapy
	231	XIV. Conclusion
R.W.E. Watts	239	**Purine Enzymes and Immune Function**
	239	I. Introduction
	241	II. Purine Nucleotide Synthesis *De Novo*
	243	III. The Interconversion, Conservation and Degradation of Purine Nucleotides, Nucleosides and Bases
	245	IV. Adenosine Deaminase (ADA)
	246	V. Purine Nucleoside Phosphorylase (PNP)
	247	VI. Ribonucleoside Diphosphate Reductase (Ribonucleotide Reductase)
	249	VII. Adenosylhomocysteinase [S-Adenosylhomocysteine Hydrolase] and the S-Adenosylhomocysteine Pathway
	253	VIII. 5'Nucleotidase and Immunodeficiency
	253	IX. The Cellular Uptake of Purines, Purine Nucleosides and Nucleotides
	254	X. Lymphocyte Transformation: Changes in Pyridine Nucleotide Pools
	255	XI. Lymphocyte Transformation: Cell Surface-Purine Synthesis Interrelationships
Tai-Wing Wu	267	**Delta Bilirubin—The State of the Art and Future Prospects**
	268	I. Introduction
	268	II. The Central Dogmas
	270	III. Quantification of Serum Bilirubins
	278	IV. Future Prospects

SUBJECT INDEX

ALA dehydratase 132
ATP 34
Adenosine deaminase 46, 245, 251, 252
Aldolase 40
Alkaline phosphatase 196–197
Amylase 195–196, 221
Antenatal diagnosis 26
Antibodies, heterophilic 201, 205
, insulin 203
, interference 188, 189
, monoclonal 201
AraC, (cytosine arabinoside) 164, 165
Aspartate aminotransferase 197–198, 221
Autoantibodies 70
Azodipyrroles 271

B cells 240, 252
Bilirubin,, binding proteins 147
, calibration 272
, delta 268–280
, direct 271
, fractions 268
, indirect 271
, reserve binding capacity 273
, total 268
Bleomycin 165

Cancer, prostate 219
, small cell lung 228
Canine distemper virus 64
Capping, lymphocytes 255
Cell culture 3, 6
Cerebrosides 56
Cholesterol 88, 89
Circadian rhythm 160,161
Cisplatin 165
Clonal variation 13
Cobalamin 151
Concanavalin A 255
Cortisol 176
Creatine kinase 190–192, 223
Cyanide–nitroprusside test 22, 24
Cyclic AMP, dibutyryl 12
Cyclophosphamide 164
Cystinuria 28
Cytochrome reductase 44

DNA 10
, probes 34, 39, 45

Deoxyadenosine 256, 259
Dexamethasone 12
Diabetes 181
Diphosphoglycerate mutase 40
Dubin–Johnson syndrome 123

Ektachem 274
Enolase, neuron specific 227
Entero–insular axis 174, 177
Epstein Barr (EB) virus 3
Ethanol 161

Fibroblasts 8, 9, 12
Food, effect on hormones 173, 182

Gamma–glutamyl cycle 44
Gamma–glutamyl transferase 62
Gangliosides 56
Gastric inhibitory peptide 177, 178
Genet, Kenya 25
Genetic linkage 10
Glucagon 175
Glucose phosphate isomerase 37
Glucose–6–phosphate dehydrogenase 34, 35, 40
Glutathione peroxidase 63
Glutathione synthetase 43
Glycogen storage disease 39
Gonadotropin 202
Growth hormone 175
Gut hormones 173, 176, 179

HeLa cells 2
Heinz bodies 42
Heme, synthesis 119
Hemolysis 34, 37, 39, 42, 47
Hexokinase 40
High pressure liquid chromatography (HPLC) 149
Human T–cell lymphotropic virus–1 (HTLV–I) 65
Human chorionic gonadotropin (HCG) 202
Hypoxanthine–guanine phosphoribosyl transferase (HGPRT) 13, 14

Immune complexes 71–73
Immune globulin, IgA deficiency 205
Immunoassay 217
Immunodeficiency 253
Insulin 160, 177, 180, 203
Insulin–dependent diabetes 103
Interferon 62
Interleukin–2 257
Intrinsic factor 146
Isoleucine 174
Isozymes, glycolytic 36

Jendrassik–Grof method 272

K–cells 180

L. leichmannii 144
Lactate dehydrogenase 193–195, 225
Lead poisoning 119

Lecithin–cholesterol acyltransferase (LCAT) 87, 89
, deficiency 96
, genetic linkage 100
, reference values 93
Leucine 174
Lipoprotein lipase 89
Lipoproteins 88
Lymphoblasts 8
Lymphocyte cytotoxicity 69
Lysozyme 226

Macroenzymes 189
Measles antibody 64
Melatonin 167
Mercaptolactate–cysteine disulfide 21–29
Merckoquant sulfite test 26
Methemoglobin 44–45, 47
Methotrexate 166, 168
Misonidazole 165
Molybdenum 25
Morphine 162
Mycoplasma 14
Myelin basic protein 67

Neonatal bilirubin 275
Neuroblastoma 227
Nikethamide 160
Nucleases 228

Obesity 179, 180
Organic acids 59

Pancreatitis 196
Paracrine action 175
Pharmacodynamics 160
Pharmacokinetics 159, 160
Phosphatase, acid 218
Phosphatase, alkaline 219
Phosphoglycerate kinase 39
Phosphohexose isomerase 229
Plating efficiency 9
Porphyria, acute intermittent 130
, classification 125
, cutanea tarda 126–128
, erthropoietic 124–126, 129
, hardero– 130
, investigation 127, 133, 134
, proto 130
, synthesis 120–122
, toxic 129
, variegata 132
Prednisolone 165
Profeciency testing 143
Protein binding 273
Purine nucleoside phosphorylase 246
Purine synthesis 241, 256, 258
Pyrimidine 5' nucleotidase 35, 45–46
Pyruvate kinase 35, 36

R-protein 145
Rabbit serum vaccines 201
Radioimmunoassays, antibody interference 149
Red cells, enzymes of 34–47
, lipids 94
Redox potential 34, 40

Sex-linked inheritance 39, 40
Single gene disorder 3, 5
Succinyl CoA 118
Sulfite oxidase 21–293

T-cells 69, 240, 252, 259
Terminal deoxynucleotidyl transferase 230
Tetrapyrroles 118
Thyrotropin 200–202, 204
Thyroxine 198–200
Transcobalamin 249
Triiodothyronine 198
Triose phosphate isomerase 38
Trypan Blue 8

Urothione 26

Vincristine 164,165
Vitamin B_{12} 141
Vitamins, in multiple sclerosis 59

Watson-Schwartz test 131

Xanithine oxidase 22
